Subject: Re: Unimatic Soil Data

Bill,

Sorry to be late responding, I was out on AWW yesterday.

Anyhow, yes, my records do indicate some VOC sample analysis at this site:

Soil samples FT-1B, 12B, -5, -7, 8, -11; SB-25A and 49C; ST-6 and 7 all collected between 5/9/03 and 7/16/03 were analyzed for four VOCs (Trichloroethene, Ethylbenzene, Total Xylenes and Napthalene). All analytical results were either ND or well below the most stringent SCC.

In addition, in 2004, I required Unimatic to resample soil boring SB-36 for VOC+10.

I do not have the historic sampling maps in my cube to locate these samples for you. Gene should have them upstairs.

Hope this helps.

Terry

have they ever analyzed soil samples for VOC at the site?
